Shinnoki 3.0: Ready to use veneered panels for interior applications

Shinnoki offers prefinished wood veneered panels for architects and cabinet makers to design and create stylish and distinctive interiors. Unlike regular veneered panels, Shinnoki products are ready-to-use and as easy to work with as a melamine board, huge time and cost-saving but with the same unique look and feel that is typical for real wood veneer.

The Shinnoki prefinished panels are made up of a top layer of veneer, an 18mm MDF core and a balance layer on the back for stability. This range of wood veneered panels does not need any further finishing. There is almost no limit to the ways it can be used - from kitchens to wardrobes in the home market, and from offices to bars or restaurant furnishings in the project market.

The boards are all CARB II certified and have no added formaldehyde (NAUF) during the production process of the Shinnoki boards. The MDF core, glue and veneer and lacquer also don't have halogenated fire retardants.
